

**Development report #4**  
**1st to 20th September 2017**

# Marie automates success

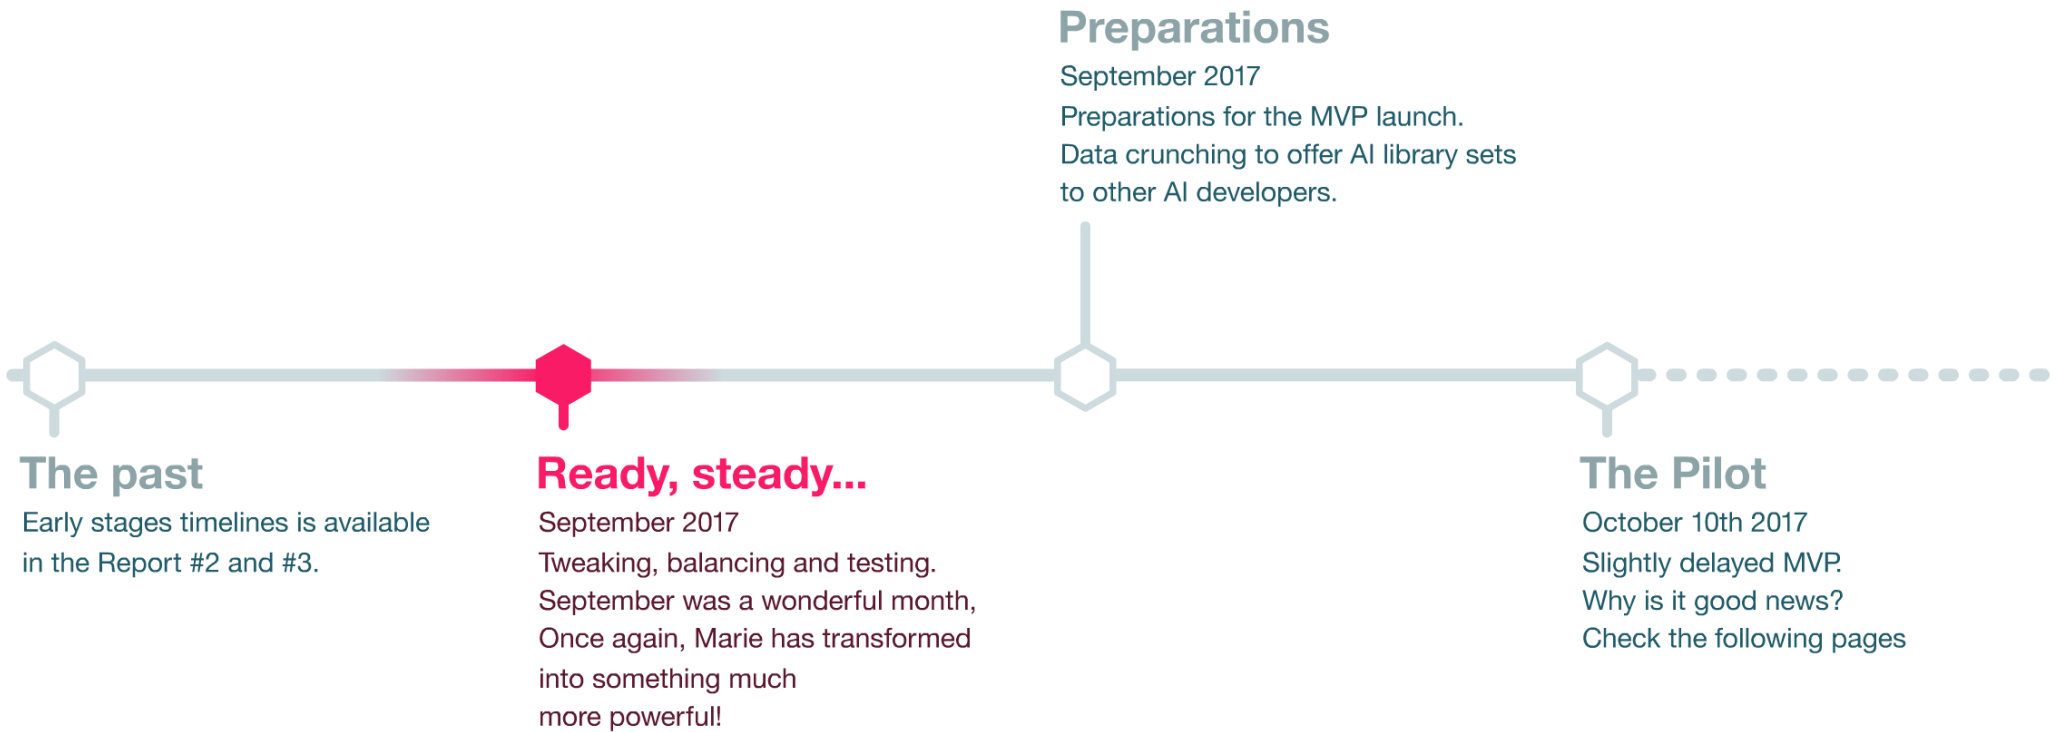

# Marie Skłodowska Curie

(1867-1934)

# Timeline: The present

And the future

# Distributed Surrogates.

## Surrogates product line 2017

Upgraded version of Marie, allowed for simultaneous design of several different Surrogates.

They complement each other and are easier to operate and lease to other companies.

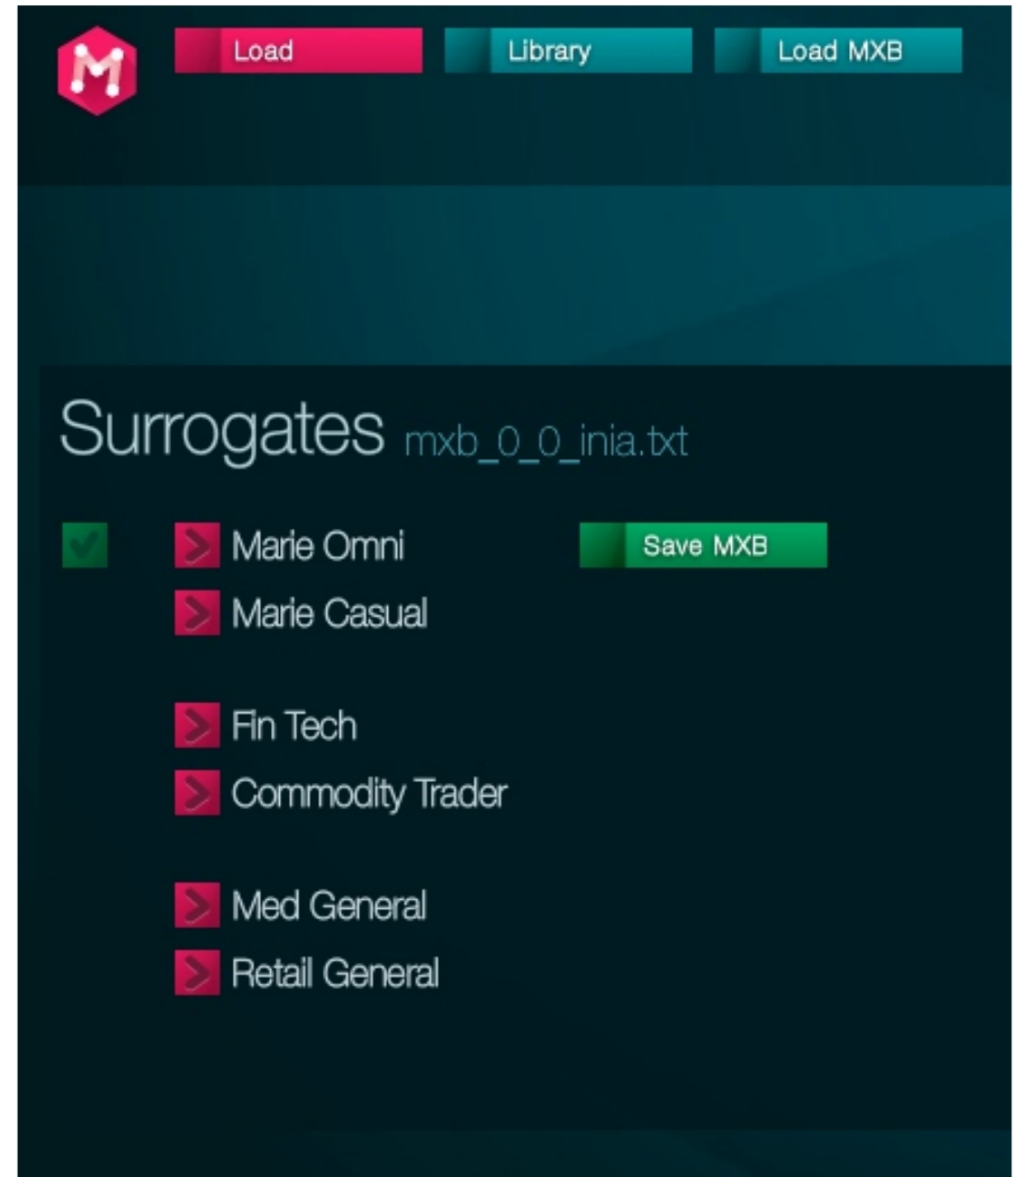

This model also mitigates the risk of low performance. Distributed surrogates can be send to a client.

**Infrastructure maintenance cost reduced to almost nil.**

(right)

Surrogates training in progress.

Includes eight initial personalities.

# 2017 plan

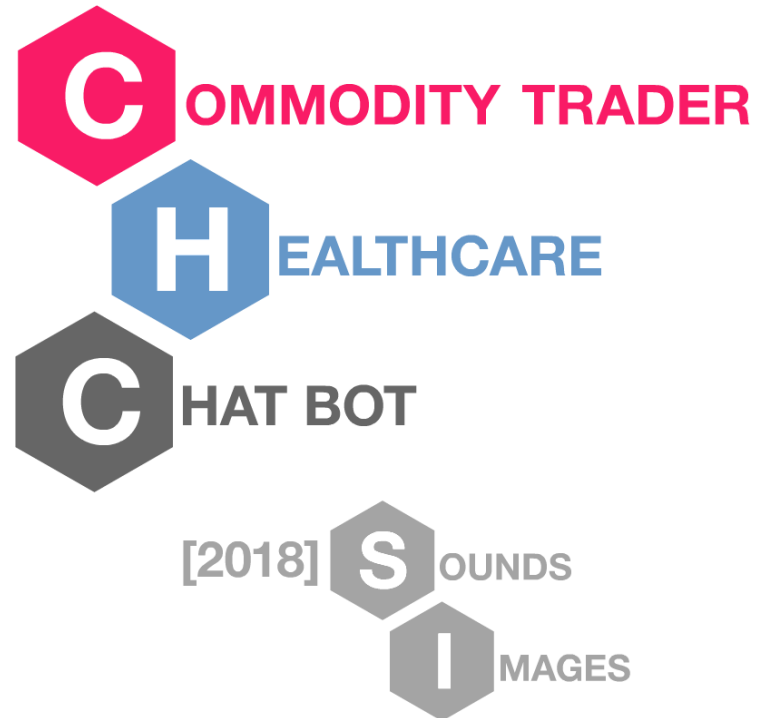

## MVP: AI Commodity Trader

Along with the Commodity Trader Surrogate, several others will be available in the product line.

All Surrogates share the same common knowledge, but are provided with extensive expertise in their particular fields.

In future a sophisticated net of Surrogates will complement each other to find the most relevant meaning in every context.

**It's like 1 000 people linked with each other.**

# Upgraded Security

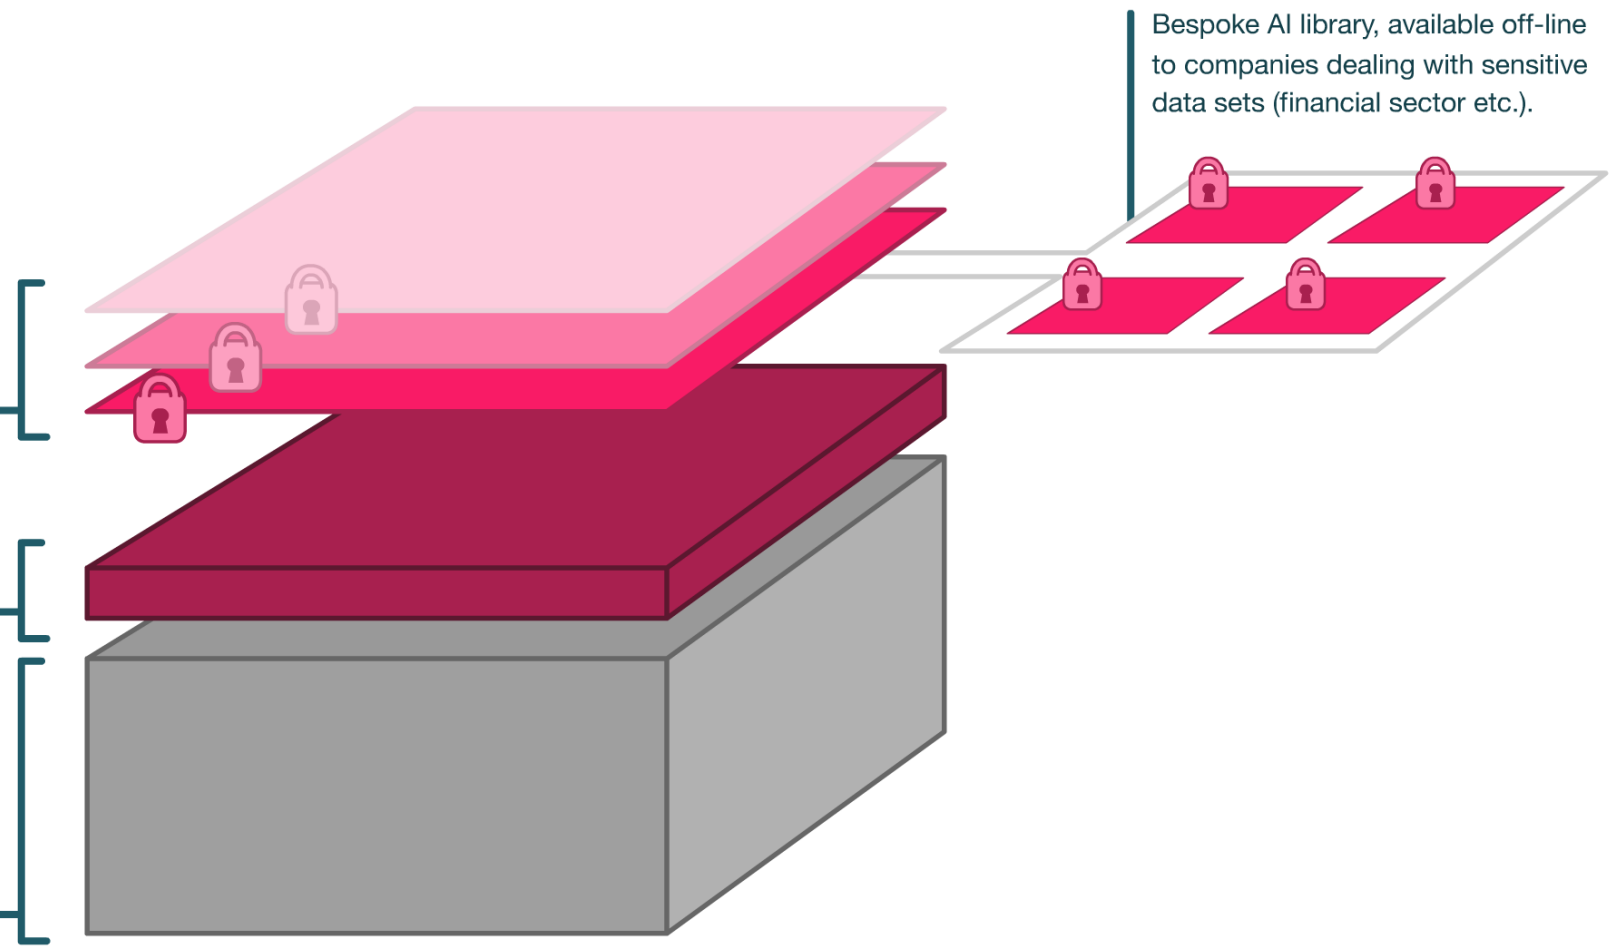

Now, Marie can be **shipped to anyone**.

The upgraded security model allows me to send part of the algorithm together Marie's 'brain', directly to other AI companies. This will improve not only the cooperation but also the market penetration potential.

Leasable AI Library:  
- common knowledge  
- individual skillset  
- off-line & on-line

Cognitive Core

Marie's core memory

Bespoke AI library, available off-line to companies dealing with sensitive data sets (financial sector etc.).

# Let's do business!

Maybe it's time to talk business?

**Marcin Rybicki**
